## **POST RADIESSE® CARE**

**What to expect after treatment:** Mild irritation, swelling, itching, bruising or tenderness at the injection site may occur. These conditions typically resolve on their own. *Firmness* occurs where Radiesse® is injected.

**Activity:** You may return to normal activities after injection.

### **Injection sites:**

Please do not rub these areas, unless instructed to by the physician. The filler may move from the place where it was injected. Please refrain from using grainy cleansers and NO facials or peels for one week.

- Ice may be applied to areas.
- Makeup may be worn immediately after injection.
- Cleanse gently over treated areas.

**Medications:** Please AVOID vitamin E, aspirin, Aleve, Motrin, Excedrin and Advil products for **5-7 days** after injection.

**Sun/Heat Exposure:** Keep newly treated areas of face out of the sun or heat for approximately 24 hours after treatment or until any initial swelling or redness goes away. Daily sun block is recommended.
